Senior full stack and product engineer with 10+ years building real time sportsbook, electronic trading, banking, commerce, and AI enabled software. Designs Go and Java services and TypeScript and React interfaces for complex, compliance sensitive workflows. Leads technical design, mentors engineers, and improves product quality, operational clarity, and release safety.

EXPERIENCE

Caesars Sportsbook | Senior Full Stack Developer

Jersey City, New Jersey, Remote | December 2021 to Present

- Designed Go and Java integrations that normalize provider data for live betting products and keep market interfaces current as data changes.
- Delivered accessible React workflows for live odds, trader operations, and analytics, using list virtualization to preserve responsiveness during continuous updates.
- Combined FullStory evidence with trader feedback to prioritize and ship usability improvements for operational workflows.
- Led technical design reviews and mentored engineers across interface and service delivery decisions.

Instinet | Senior Full Stack Developer

New York, New York | December 2017 to December 2021

- Built Node.js and Java services for electronic trading workflows, balancing throughput, reliability, and compliance requirements.
- Replaced legacy Flash workbenches with modular React tools for traders and engineering teams, improving maintainability and release independence.
- Strengthened GitLab CI and Kubernetes workflows with clearer release inspection and recovery paths.

Lab49 | Front End Developer

New York, New York | June 2017 to December 2017

- Built accessible React research portals and Java service integrations for banking clients, meeting compliance and performance requirements.
- Translated product and legal constraints into practical interface and integration designs.

Twisted Rope | Full Stack Web Developer

Buffalo, New York | October 2015 to June 2017

- Built responsive React and Node.js applications for hospitality and retail, establishing reusable interface patterns across client work.
- Implemented analytics and search foundations that enabled campaign evaluation and planning.

SELECTED PROJECTS

[Stackctl](#) | Go, Podman, terminal interface

Created reproducible local service stacks with stable JSON contracts, health diagnostics, release checksums, SPDX SBOMs, and artifact attestations.

[Relantern](#) | Go, Next.js, PostgreSQL, pgvector

Built a developer intelligence platform with hybrid retrieval, reciprocal rank fusion, structured LLM outputs, evidence validation, cost controls, and offline evaluations.

[Remorseless Records](#) | Next.js, Medusa, Stripe, PostgreSQL, Meilisearch

Built a commerce system with idempotent payment recovery, versioned publishing workflows, search, and privacy bounded telemetry.

SKILLS

Application: TypeScript, React, Next.js, Tailwind CSS, Zustand, TanStack Query

Services and AI: Go, Java, Node.js, Spring Boot, GraphQL, gRPC, retrieval, ranking, structured LLM outputs, evaluation

Data and messaging: PostgreSQL, pgvector, Redis, Apache Kafka, NATS, WebSockets, Server Sent Events

Platform and operations: Kubernetes, Docker, Podman, GitLab CI, OpenTelemetry, Grafana

EDUCATION

SUNY New Paltz | Bachelor's degree in Computer Science | August 2011 to May 2015
